Download the Raspberry PI imager at the following address: https://www.raspberrypi.com/software/

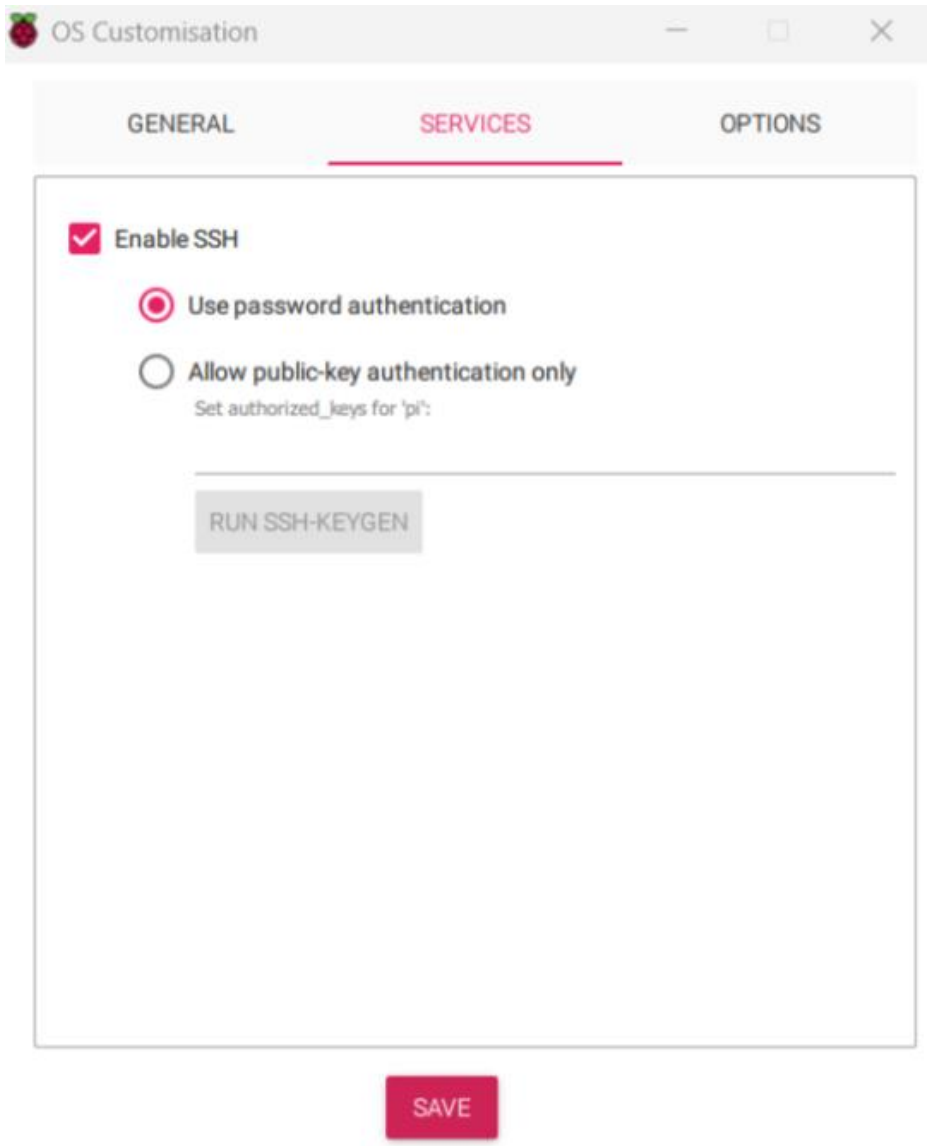

Settings:

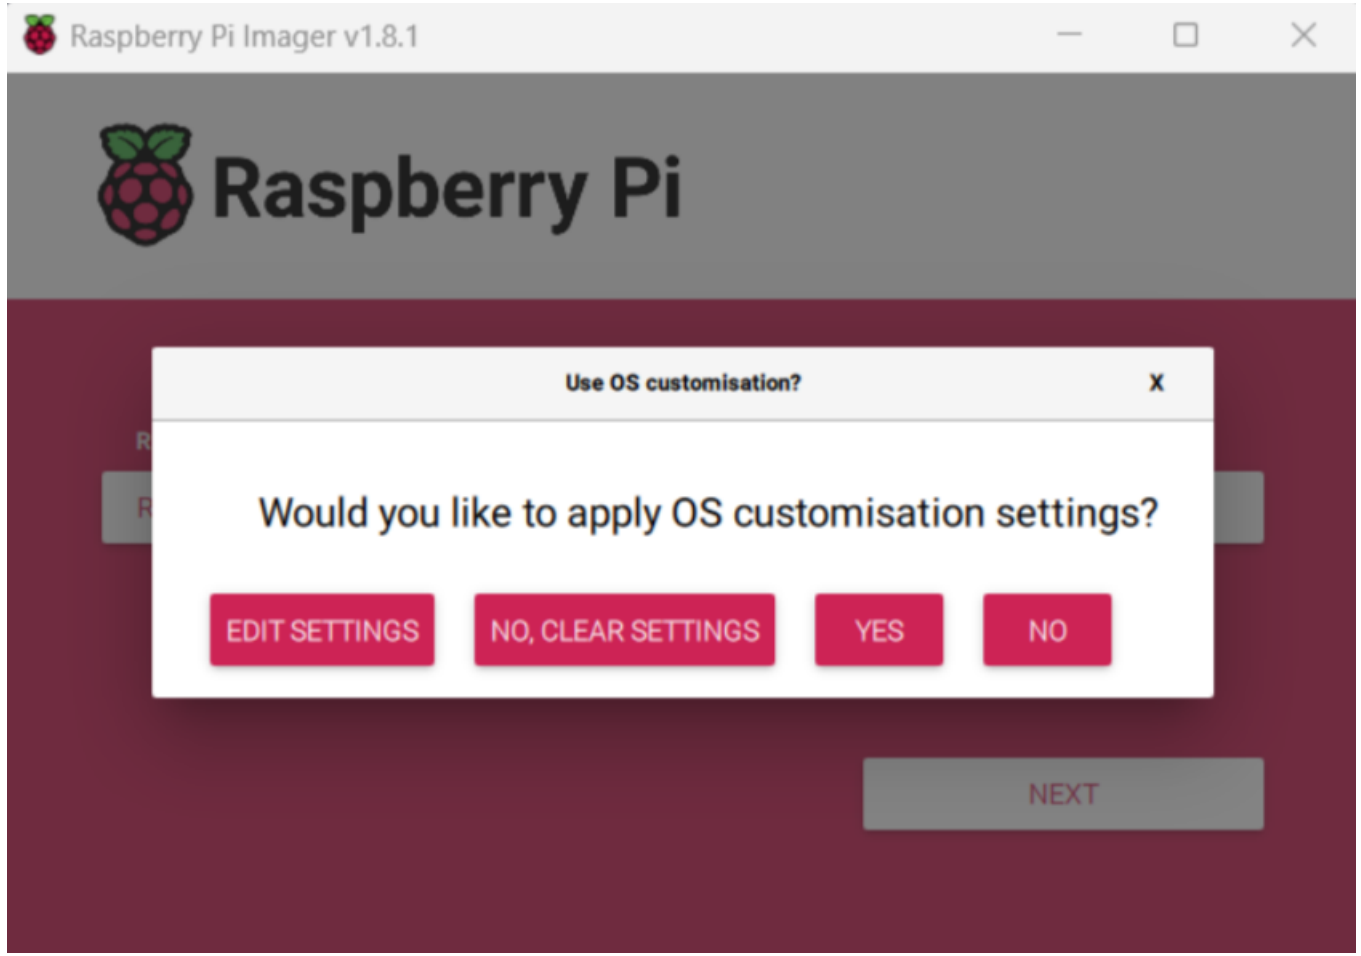

- Raspberry 3 model b
- OS legacy
- Select the SD card to flash
- Click “next” and then “Edit Settings”

Up to you to chose but you MUST have one

The WIFI you'll use. Do NOT use eduroam

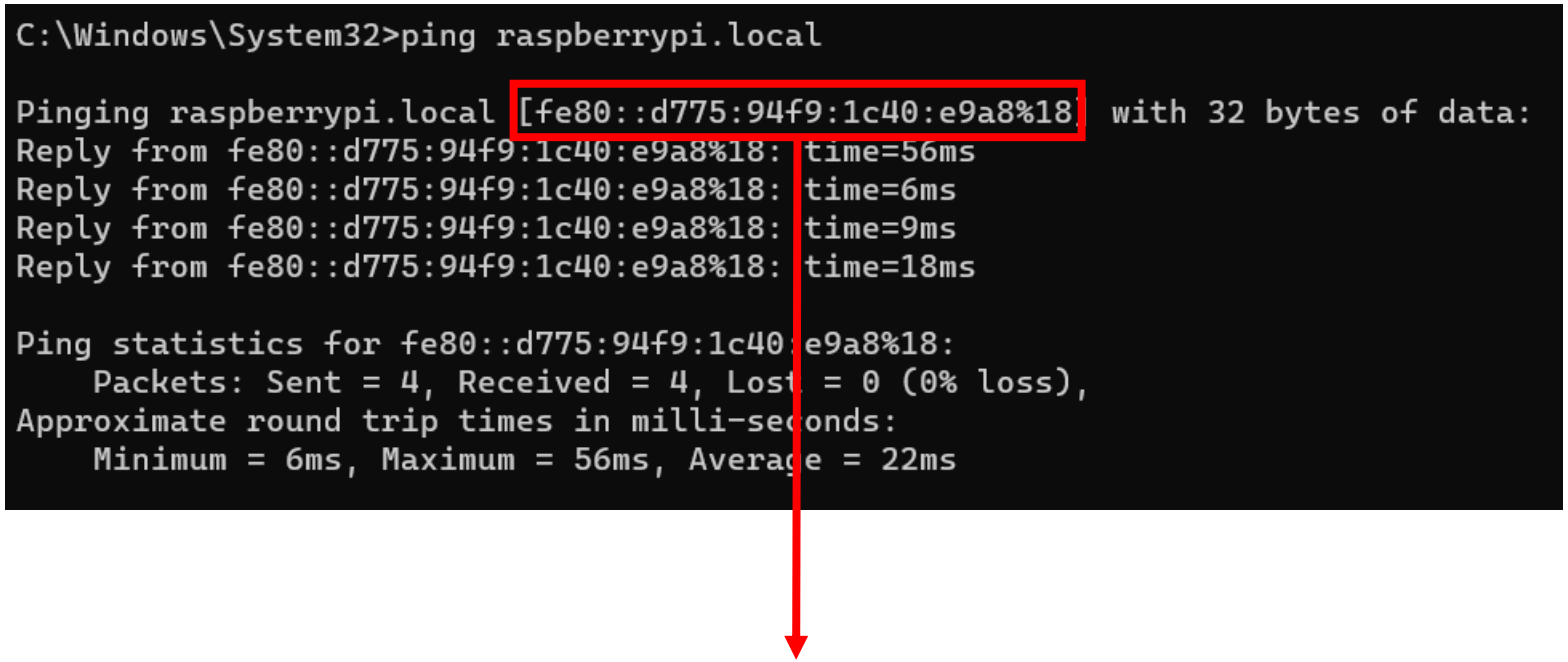

Save previous settings and apply the OS customization settings.
Click yes when prompted to erase the SD card

Once the setup is complete boot the SD card and wait for the PI to connect to the network (it might take a few minutes). With your PC connected to the same network try to ping the PI to check the connection

The IP of your PI for the SSH connection

Download and install MobaXterm: https://mobaxterm.mobatek.net/
(This is optional. Other tools exists: putty, filezilla, WinSCP, …)
